GOVERNMENT OF INDIA NATIONAL COMMISSION ON LABOUR A BACYGROUND NOTE AND BASIC STATISTICS FOR BIHAR

140

NATIONAL RESULT CLATRE OF LABOUR INFORMAT DOCUMENTATION V. N.L.I. NOIDA

ACC. No. L-80 DATE 22-1-99

1.1

. .

A BACKGROUND NOTE ON BIHAR STATE

GENERAL

Physical Background: The area spread over about 1,74,008 square kilometres and surrounded by Nepal and Darjeeling on the north, West Bengal on the east, Uttar Prad-sh and Madhya Pradesh on the West and Orissa on the south, now constitutes seventeen districts of the present State of Bihar. This area can be divided physically into two distinct but almost equal units- the Gangetic plain and the Chotanagpur plateau. The Gangetic plain, which is divided by the river Ganga into north and south Gangetic plains, is a flat alluvial part, the plateau region abounds in hills, mountains and forests and has an altitude ranging from 1,000 to 4,000 feet. The peninsular portion of Bihar is of great economic importance as it contains the most valuable minerals like iron ores, coal, mica, etc. North Bihar is mostly a flat plain and is often called the Garden of Bihar. In South Bihar the Kaimur range of hills, the casternmost termination of the Vindhya Ranges, extends to the Shahabad district. The Rajmahal Hills form the principal range in the Santhal Parganas, the Chotanagpur as a whole abounds in hills and forests. In 1961 there were 67,665 villages in Bihar as against 1, 12, 624 in Uttar Pradesh, 70, 414 in Madhya Pradesh and 5,64,718 in India as a whole.

Important Rivers: The State of Bihar is endowed with many rivers. The most important one is the Ganga, which flows wost to east over a distance of about 350 miles in the State. The Gorga, the Gandaki, the Burhi Gandak, the Bari Gandak, the Bagmati, the Baya, the Kamala, the Tiljuga, the Kosi, the Mahanada are the other important rivers which run through North Contd......2/- Bihar. The principal rivers which are in South Bihar include the Sone, the Punpun, the Phalgu, the Karmansand, the Durgawati while those which run through Chotanagpur are the Damodar, the Subarnarekha, the Barakar and the Koel. Broadly, there are three main flood zones in the area, namely (i) the Gandak Valley, (ii) the Adhwara or the Central zone and (iii) the Kosi Valley.

Civilisation in Bihar grew along the river Ganga and spread outwards, north and south although towards the latter direction it was checked by the hills and the plateau of Chotanagpur. This formidable barrier kept the people immobiled with the result that the cultural and economic patterns of Chotanagpur remained distinct from these of the river valley civilisation of the north. The result of this geographical isolation was that economically the immense natural resources of the plateau remained undisturbed until the end of the last century. The people of Chotanagpur retained their tribal social patterns and methods of production, depending on hunting and primitive agriculture and crude industry. Commerce developed along whe river Ganga and many towns on it grew as centres of trade even in ancient times.

Forests and Forest Products: Bihar had an area of 31,427 square kilometres as forest in 1964-65, quite a substantial portion of which is in Chotanagpur. The major products of Bihar's deciduous forests are various types of timber and firewood. There are also the minor forest products such as the Sabai grass, valuable in the manufacture of ropes and paper; bamboo, fibres and leaves with an estimated growing stock of 6,066.5 million cubic feet and which provide among other things materials for tanning, dyes, and various oils and medicinal preparation. Bihar accounts for 60 per cent of the total Indian production of stick lac of 42,000 tons (average) per annum. Bihar had realised

Contd 3/-

-2-

about 27 million rupeus as revenue from the forests during 1964-65.

<u>Minerals:</u> Bihar is the most important mineralbearing State in India and accounts for 38 per cent of its mineral production. It produces 100 per cent of India's copper and apatite, 95 per cent of Kyanite, more than 50 per cent of coal, mica, bauxite and china-clay and about 40 per cent of iron ore. Chotanagpur plateau contains 80 per cent of India's known deposits of coal and 100 per cent of its coking coal. Important coalfields of India such as Raniganj, Jharia, Bokaro, Daltonganj, Jainti, and many others which outturned about 296 lakh tonnes of coal in 1964-65 are in the State of Bihar.

<u>Climate and Rainfall:</u> The annual mean temperature varies from 75.3°F to 80.3°F. The maximum variation in temperature is between 104°F and 115°F and the minimum between 39° and 49°F. May is the hottest month of the year, with the mean temperature shooting above 90°F, and Gaya in South Bihar is the hottest place with the temperature rising upto 115°F.

The normal average rainfall for the State is 50 to 53 inches, nearly 85 to 90 per cent of the rainfall being concentrated between mid-June and mid-October. Generally, rainfall is heavy in the Chotanagpur plateau, but the area of heaviest rainfall is the districts of Champaran and Purnea in North Bihar.

Per Capita Income: Agriculture being the main source of subsistence for the people, it is not surprising that the per capita income of Bihar (Rs.279.37) is much lower than the national average (Rs.421.5). It is also lower than the per capita income in any of the other major States. MANPCWER

Bihar had a population of 38.8 millions in 1951 constituting 10.74 per cent of the total population of India Contd......4/-

-3-

which rose to 46.4 millions or about 11.12 per cent of the total population of India in 1961. By size of population it is the second largest State in India. About 92 per cent of the people live in villages and only a little over 8 per cent in towns and cities. The population density of Bihar is 691 persons per square mile as against the all-India average of 373.

-4-

Working population constitutes about 41.4 per cent of the total population. About 77 per cent of the workers in Bihar are employed in agriculture as against 69.5 per cent in India. Although the plateau region of Bihar contains large reserves of coal and other raw materials of industry, and a few large manufacturing concerns have been established, only 2.2 per cent of workers in Bihar are employed in manufacturing industry as against the average of 4.2. per cent in India. The percentage of workers employed in household industries, trade and commerce, construction, transport and communications and other services is also significantly lower than the all-India average. In rural areas agricultural wage employment is available to male workers for only 190 days in the year, as against the afl-India average of 194 days while non-agricultural employment is available for 31 days as compared to 27 days for all-India.

AGRICULTURE AND ANIMAL HUSBANDRY

The net sown area in Bihar is as much as 21 million acres, which represents 74 per cent of the topographically usable area and about 50 per cent of the total area. Area sown more than once is about 27 per cent of the net area of cultivation per capita is 0.42 acre for the State as a whole. The average size of holdings in the State is about 2.94 acres and well over 80 per cent of the holdings are below 5 acres in extent. Cultivation is mainly dependent on rainfall. As rainfall is often inadequate and erratic, droughts Contd......5/- occur not infrequently over large part of the State. The North Bihar plains are also susceptible to heavy floods. Consequently, agricultural yields have been generally low and uncertain.

Of the four harvests, corresponding to seasons of the year, there is heavy dependence on the <u>aghani</u> or winter crops (paddy, pulses, oilseeds, sugarcane) which cover 50 per cent of the area sown, while <u>rabi</u> (wheat, gram, barley) and <u>bhadai</u> (maize, paddy and jute) crops cover 29 and 18 per cent respectively. Summer crops cover only a small area in North Bihar. About 81 per cent of the total area sown is under food crops, rice being the predominant crop with 49 per cent of the total sown acreage and 75 per cent of the acreage under principal food crops. The important cash crops, which together account for only about 5 per cent of the net area sown are jute, sugarcane, tobacco, potatoes and chillies. Gross irrigated area forms about 19 per cent of the total area sown.

Bihar has a total livestock population of 31 million, its bovine stock of 16 million constitutes the third largest among the Indian States. Milk available for consumption is only 1.7 ounces per head per day. There are only 2.84 acres of land under fodder for 100 bovine stock, as compared to 32 acres in Punjab. Bihar ranks first among the States in the yield of fresh inland water fish, with 20 per cent of Indian production.

TRANSPORT

There is one mile of railway in Bihar for every 10,800 persons, as against 10,600 in India/es a whole.

The total road network in Bihar is about 81,026 kilometres which is the highest for any State except U.P. Village and district roads account for 45,557 and 29,458 kilometres respectively. The length of roads maintained

-5-

by the State Government is 6,011 kilometres of which 1,505 kilometres are National Highways.

-6-

POWER AND INDUSTRIES

About 92 per cent of the power generation in the State is from coal-burning plants as against corresponding all-India figure of 54 per cent. As far as hydro-plants are concerned, the contribution is only 6 per cent while the share of Diesel stations is about 2 per cent. With installed capacity of 349 thousand K.W., Bihar ranks seventh among the States of India. The per capita consumption is 53.92 K.W.H. as against the all-India figure of 54.44 K.W.H. Bihar is unique in having practically all its electricity consumption concentrated in industry and public works. Only about 4 per cent of the consumption is in households.

The economy of Bihar continues to be predominantly agricultural and rural in character, with only about 7.7 per cent of the workers in the State being engaged in household and manufacturing industries as against 10.6 per cent in the country as a whole. Bihar has fewer registered factories with higher employment per unit as compared to the all-India average. The total number of industrial units in the State in 1965 was near about 2 lakhs. As much as 95.8 per cent of these were unorganised small-scale units; only 0.3 per cent were large-scale and 3.9 per cent were organised small-scale units. From the angle of employment the organised small-scale sector was the most important, employing 53.2 per cent of the total labour force; the large-scale units, though few in number, employed 37.2 per cent of the labour force, while the small organised sector provided employment to only 9.6 per cent.

The most important industries in Bihar are based on her

mineral resources, such as iron and steel and mica. Important industries with an agricultural base are sugar, paper and pulp and tobacco. Public sector industries include iron and steel plant, fertiliser plants, general engineering workshops, electrical generating units, printing press, oil refinery, machine tool plant.

BIHAR AND FIVE-YEAR PLANS

The annual net State output increased during the period of three plans from about Rs.590 crores to over Rs.1,000 crores. The outlay fixed for different sectors during the three plans was as follows:

| Rs. in lakhs | | | | | | | |
|---|------------------|------------------|-----------------|--|--|--|--|
| Head | First Plan | Second Plan | • Third Plan | | | | |
| 1. Agriculture and Community Development | 16.04 (21.9) | 54.20 (30.4) | 68.62 (20.4) | | | | |
| 2. Irrigation and Flood Control | 12.94 (17.7). | 26.98 .(15.2) | 75.95 (24.8) | | | | |
| 3. Power | 9.46 (12.9) | | 84.73 (28.2) | | | | |
| 4. Industry and Mining | 1.04 (1.4) | 8.47 (4.8) | 9.69 (3.3) | | | | |
| 5. Transport and Communications | | 15.20 (8.5) | 17.09 (5.5) | | | | |
| 6. Social Services | 21.19 (28.9) | 41.28 (23.2) | 57.98 (17.6) | | | | |
| 7. Miscellaneous | 1.82 (2.5) | 0.71 (0.4) | 0.70 (0.2) | | | | |
| Total | 73.27 | 177.98 | 314.76 | | | | |

Note: Figures in bracket indicate percentage.

Contd......8/-

-7-

An outlay of Rs. 602.10 crores has been proposed for the Fourth Five Year Plan of the State. The distribution of the Plan outlay among the various economic heads in percentage is 23.5 for Agriculture, Community Development and Cooperation, 19.8 for Irrigation and Flood Control, 21.4 for Power, 5.8 for Industry and Mining 6.5 for Transport and Communications, 22.8 for Social Services, and 0.2 for Miscellaneous works.

AGRICULTURE

At the commencement of the First Plan the annual production of foodgrains was about 51 lakh tonnes which increased to 72.50 lakh tonnes i.e. by about 22 lakh tonnes or about 40 per cent approximately at the end of the Third Plan. The total Fourth Plan outlay for agricultural production is Rs.270.45 crores which torks out to be 45 per cent of the proposed total outlay of the Fourth Plan.

IRRIGATION AND FLOOD CONTROL

The Kosi project was one of the major projects which was completed by the end of the Third Plan. Among other major projects completed by the end of the Third Plan mention may be made of the remodelling of the Sone canals and the construction of the barrage over the river Sone near Dehri. These along with other projects provided irrigation for about 5.86 lakh acres at the end of the Third Plan. It is expected that with the execution of these projects, acceleration of certain projects, more especially the Gandak, it would be possible to provide effective irrigation to an additional 26 lakh acres by the end of the Fourth Plan. Under the minor irrigation schemes i.e. ground water schemes and small reservoir and weir schemes to the irrigation potential created is approximately 6 lakhs and 19 lakh acress respectively. During the Fourth Plan the Gandak

-8-

project and other small projects will be made effective to provide irrigation for 3.3. million acres.

-9-.

POWER

Power generation in Bihar was largely confined to self-generating units in a few mineral and industrial centres and electricity supply was available in only 10 towns/and villages out of a total of about 68,000 before the commencement of the Planning era. Total installed generating capacity was increased from 244 (M.W.) in 1950 to 859 (M.V.) in 1965. Similarly per capita energy and number of places electrified which were 15.3 (K.B.S.) and 10 in 1950 increased to 60.0 and 4070 in 1965 respectively. Thus the increase in 1965 over 1950 in installed capacity works out to 252 per cent and in per capita consumption to 292 per cent. About 6 per cent of the towns and villages in the State have been electrified so far, and in rural electrification and development ground water resources with the help of electrical pumps, the State is well below the average for the country as a whole.

INDUSTRY AND MINING

A few large-scale industries based on the mineral resources of the State had been established well before the First Plan period, but their presence did not attract many ancillary or subsidiary industries in the State. Only two factories viz. the Superphosphate Factory at Sindri and the High Tension Insulator Factory at Ranchi with a total outlay of Rs.1.83 crores have come into existence. Some of the factories such as Electrical Equipment Factory, Oil Refinery and Barauni, Fertiliser Factory, Petro Chemical Complex, Machine Building Plant, Foundry Forge and Machine Tools

Plant are in the initial stages. The decision to locate a large steel plant based on the coking coal resources around Bokaro was taken in the Second Plan period, but its construction could be taken up only towards the fag-end of the Third Plan. The index of industrial production in Bihar with 1956 as base-year works out to 151.3 as against 184.4 for all-India.

The southern part of the State is the most mineralised tract in India. The net output of mineral production in Bihar rose from Rs.23.05 crores in 1950-51 to Rs.39.29 crores in 1965-66. The percentage increase in the net output in 1965-66 over 1950-51 works out to 70.46 per cent. The index of mineral production in the State, taking 1955-56 as base (100) was only 151 in 1965-66 as against 184 for all-India.

During the Fourth Plan period the installed capacity of the Superphosphate Factory at Sindhri will be increased from 72,000 tonnes to about 2 lakh tonnes per year. While that of the High Tension Insulator Factory at Ranchi will be raised from 2400 tonnes to 4800 tonnes, during the plan period.

Coal production in Bihar will go up by nearly 80 per cent while value of mineral production will rise from Rs.85.61 crores in 1965-66 to Rs.153.72 crores by 1970-71. The chief items of minerals and the quantities to be mined are:

| Minerals | 1965-66 1970-71 (Million Tonnes) | | | | |
|--------------|-------------------------------------|-------|--|--|--|
| 1. Coal | 31.00 | 54.00 | | | |
| 2. Iron core | 5.60 | 14.00 | | | |
| 3. Limestone | 2.50 | 5.15 | | | |

2

The production of steel mill increase from the present level of 2 million ingot tonnes to about 3.5 or 4 million tonnes by 1970-71.

It is estimated that the total output worth Rs.50 to Rs.60 crores will be obtained as a result of a large industrial complex which is likely to come up in Bihar around Ranchi for the production of industrial machinery, metallurgical machinery, heavy machine tools, etc.

High temperature carbonisation of coal will go up by 4 million tonnes during the Fourth Plan while an additional capacity to 1.0 million tonnes of petroleum refining is planned by 1970-71.

RCADS AND ROAD TRANSPORT

Construction of National and State Highways and other major district roads has increased the road traffic in Bihar during the three plans period. The mileage under roads in these categories has increased from 3,025 miles at the commencement of the First Plan to 11,850 miles at the end of the Third Plan. The progress has been particularly marked in North Bihar where the length of metalled roads has increased from less than 100 miles in 1951 to 3,162 miles at the end of the Third Plan. Progress has also been made with the widening of trunk roads, and the length of double lane roads has increased from 57 miles in 1950 to 515 miles in 1965.

SOCIAL SERVICES

Education: FThe enrolment in primary classes has increased from 14.6 lakhs in 1950-51 to 40.4 lakhs in 1965-66 i.e. by 280 per cent while that of middle school level and secondary stage increased from 2.2 lakhs to 7.2 lakhs and from 1.5 lakhs to 5.9 lakhs during the period under review respectively. In the latter case the increased percentage in Bihar was 15.1 per cent against 17.8 per cent for all-India. At the university stage, the enrolment has Contd......12/-

-11-

increased from 23,000 in 1950-51 to about 1,10,000 in 1965-66 while the total enrolment for all States in India in the latter year was 11 lakhs. The percentage of students studying science at the university stage rose from 16.4 in 1950-51 to 31.5 in 1965-66, while the corresponding percentage for all-India was 40 during the latter period.

The enrolment for technical classes also increased from 132 in 1950-51 to 1376 in 1965-66. Similarly; at the diploma level the intake has increased from 100 in 1950-51 to 2129 in 1965-66.

The level of literacy in Bihar was 18.4 percent as against 24 per cent in India as a whole in 1961. About Rs.50.10 crores have been provided during the Fourth Plan for general and cultural education. An outlay of Rs.6.94 crores has been proposed for technical education during the Fourth Plan. Emphasis will also be laid on the craftsmen training scheme, so as to increase the intake capacity in the industrial training institutes from 12976 to 19976 during the Fourth Plan.

Health: The number of hospital beds has increased from 4286 in 1950-51 to 12,755 at use end of the Third Plan. The ratio of beds to population is however only 1:4070 as against the all-India average of 1:2060. The number of doctors has increased from 4813 in 1950-51 to 7892 in 1965-66. The doctorpopulation ratio at the end of the Third Plan was 1:6597 as against the average of 1:5726 for all-India.

WORKERS AND EMPLOYERS' UNIONS

to the terms of the second second

In 1956-57 the number of workers' unions on register was 532 with about 3 lakhs members which rose to 640 and 4 lakhs in 1964-65 respectively. In the latter period there were 2 employers'

Contd......13/-

unions whose membership on register was below 500.

There has been a steady decline in the number of disputes and of man-days lost from 1957 to 1963. The number of disputes and man-days lost was 116 and 9,62,277 in 1957 while the corresponding figures for the year 1963 were 62 and 80,289 respectively. In 1966, the number of disputes reported was 95 and of man-days lost 2,67,848.

Table: 3.1:

Note: -

Average daily encloyment, total wage bill, per capita annual money earnings and index numbers of money earnings of employees earnings less than Rs. 200/- per month in Manufacturing Industries.

. 6 -

| Year | Average daily employment ('000s) | Total wage Bill('000s) | | ndex numb ers of oney earnings Base 1951=109) |
|------|--|---------------------------|--------|---|
| 1956 | 106 | 1,31,606 | 1,236 | 104.8 |
| 1957 | 108 | 1,40,117 | 1,299 | 113.2 |
| 1958 | 108 | 1,38,226 | 1,283 | 110.8 |
| 1959 | 110 | 1,49,894 | 1,359 | 120.9 |
| 1960 | 110 | 1,52,706 | 1,394 | 125.2 |
| 1961 | 113 | 1,68,122 | 1,484: | 132.4 |
| 1962 | 125 | 1,72,760 | 1,385 | 127.5 |
| 1963 | 127 | 1,82,336 | 1,432 | 129.1 |
| 1964 | 139 | 1,88,805 | 1,358 | 116.6 |

The above figures exclude those for Railway Workshops and groups of industries of seasonal nature consisting of Food, Beverages, Tobacco and GiAs and Presses. The figures of per capita annual earnings have been obtained by dividing the actual wage, bills by the corresponding figures of average daily employment. Figures of average daily employment given above are as obtained from returns received under the Payment of wages Act, 1936 and hence, are different from those collected under the Factories Act, 1948. Recelled of Manual Action Manual Action Statistics.

NCL Ref. No. BR-I.17

National Commission on Labour

Reply to the Commission's Questionnaire from Government of Bihar.

| S | .No. 4.No. | Points for Elucidation |
|----|------------|---|
| 1. | • 12(a) | What are your suggestions for revitali- |
| | | sing the bipartite committees at the |
| | | plant level to ensure improved working |
| | | conditions? |
| 2. | . 13 | Do you favour uniformity in the total |
| | | number of holidays in different regions? |
| 3. | . 26 | Could you give an idea as to what extent |
| | | independent unionism (free of political |
| | | affiliations) has developed in your State? |
| 4. | • 27 | Do you believe that if a sole bargaining |
| | | agent is determined and only that union |
| | | is given the right to raise disputes, the |
| | | situation will improve? |
| 5. | . 28 | Could you spell out the factors which |
| | | have been of late responsible for the |
| | | trade unions to arrive at long term |
| | | settlements at industry-level? |
| 6. | 29 | What in your views can be the reasons |
| | | for the change towards mutual accommodation |
| | | and understanding between employers and |
| | | trade unions? |
| 7. | 45 & 46 | Will the linking of the membership |
| | | subscription to wages with a provision |
| | | |

for minimum, improve the situation?

...2/-

-:(2):-

S.No. Q.No.

47

Points for Elucidation

8.

Can you give the reasons against making the system of 'check-off' a statutory obligation? Don't you feel that if a system of 'check-off' is introduced, the duality of membership will be minimised and may also facilitate the verification of membership of different Unions?

9. 49 In the ultimate analysis, will your suggestion make any difference so far as the division of the trade unions on political ideology is concerned?

10. 51 Don't you think that the leaders on whom evolves the responsibility of creating internal leadership are the very persons who would like to keep the hold on the unions?

11. 56 &(P.37 of the Memo) For recognising a union, there is a simple criteria of majority but when an unrecognised union has to dislodge the recognised union, the union should have the following of at least 75 percent of the worker members. Will it be possible for any union to show this strength; and is it fair to have a separate criterion for initial recognition and for dislodging?

12. 61 Often a point has been made that the procedure prescribed in the Code of Discipline is cumbersome, dilatory and prone to influences. What is your experience in this regard?

... 3/-

| | | -:(3):- |
|-------|-----------------|---|
| S.No. | Q.No. | Points for elucidation |
| 13. | 85 | Can you substantiate your reply? |
| 14. | 87-88 | Can we do away with adjudication system |
| | | by having an advance provision in an |
| | a sala da da sa | agreement between the workers and employers |
| | | that in case of failure of collective |
| | | bargaining, resort will be to voluntary |
| | | arbitration? |
| 15. | 104 | Will you elaborate your reply? |
| 16. | 107 | Don't you think that the revival of Labour |
| | | Appellate Tribunal may minimise writ |
| | | applications to High Courts/Supreme Court? |
| 17. | 112 | Can you give the reasons for 'tardy |
| | | progress'? |
| 18. | 143 | Don't you think that dearness allowance |
| | | is one such subject on which workers feel |
| | | very much exercised? Will it, therefore, |
| | | be better if the formula for grant of |
| | | dearness allowance is clearly defined? |
| 19. | 155 a) & (b) | What steps will you suggest for safeguar- |
| C | a) & (b) | ding consumers' interest? |
| 20 | 173 | What steps will you suggest for creating |
| | | this motivation for improving standard of |
| | | living amongst the workers? |
| 21. | 206 | You have suggested a number of avenues for |
| | | a broad based programme. How many of |
| | | these suggestions have been tried by the |
| | | Govt. and with what results? |
| | | |
