.....

A BACK GROUND NOTE ON ORISSA STATE

The state of Orissa covers an area of 155,845 square kilometres (about 5% of India) with a population of 17.55 million (about 4% of country's population). The percentage variation in population during 1951-61 was about 2.0 per cent per year. It has a common boundary with west Bengal in the north east, Bihar in the north, Madhya Pradesh in the west and Andhra Pradesh in the south.

Orissa is an extensive plateau which slope gently into the coastal plain along the Bay of Bengal. The Mahanedi, flowing west to east through the plateau, cuts it into two defined parts. The northern part is an extension of the Chotanagpur plateau and the southern part is covered by hill ranges known as Eastern Ghats. The State has 13 districts.

That Orissa is one of the least developed parts of the country does not need much proving. Whether it is the consumer expenditure per capita or Income per capita or any other indicator of the pattern of production, services and economic activities generally, Orissa's place in the list of States in the Union is invariably among the last.

Climate:

The Climate of Orissa is characterised by high temperature and medium to high rain fall. The minimum temperature is 91°F rising to 101°F in April and May and falling to 95°F in July and 80°F in January. The average rainfall of the State is 59 inches varying from 55 to 63 inches in different regions. Floods are a bigger manace than drought.

Manpower:

According to 1961 census, the population of Orissa was 17.55 millions and density per sq. km. was 113 as against 399 in West Bengal, 435 in Kerala and 251 in U.P. Sundargarh district showed the highest increase of 3.75 per cent per annum as compared to 1.99 per cent/annum for Orissa State during the decade 1951-61, ^{per} mainly due to the establishment of Rourkela Steel plant. The density of population varied from region to region within the State. The coastal plain was the most densely populated while the hilly areas had a relatively low density - highest being in Balasore district (565 per sq. mile and lowest in phulbani (120 per sq. mile).

Orissa has the highest percentage of tribal population among the Indian State next only to Nagaland. The tribal population forms 14.2 per cent of the total tribal population in the country. The percentage of scheduled tribes population is 24.1 and the scheduled castes is 15.7 of the total population of the State. As many as 62 tribes of different economic gradation constitute the scheduled tribe population.

In 1961, 93.7 per cent of population of Orissa lived in rural areas as against 82% in India, 92.3 per cent in Assam. The village in Orissa were relatively small and scattered.

The small urban population of the State was distributed in 62 towns of which only four had a population of more than 50,000. There are 1001 females per 1000 males as against 941 for the country.

Working Force:

According to 1961 census, the working force (7.7 million) in Orissa constituted 43.7 per cent of the population as against 43.0 per cent for the country. The break up by industry divisions in Orissa State is almost similar to the break up for the country except that in Orissa it was slightly higher in case of cultivators. The work force in 1966 and 1971 is estimated to be 8.4 millions and 9.2 millions respectively. The third Five Year Plan has left a backlog of 2 million unemployed persons in the State and it is estimated that there will be an addition of 1 million new entrants in the labour force during the fourth plan. The Fourth Five Year Plan will have to provide employment to about 3 million unemployed persons.

State Income:

The State is among the poorest and least developed regions of the country. The State income in 1965-66 was expected to be about Rs.590 crores at 1960-61, prices. The per capita income at current prices rose from Rs.203.63 in 1954-55 to Rs.290.78 in 1963-64 and the State income rose from Rs.315.95 crores to Rs.536.20 crores during the same period.

Agriculture:

Agriculture is the main economic activity in Orissa whether judged by the volume of employment or by the value of output. In 1960-61, nearly 64 per cent of the total income of Orissa was derived from Agriculture as against 50 per cent in India. About 70 per cent of the working population of the State was engaged in agriculture. In Orissa, the net cultivated area is a little over 16 million acres of which rice accounts for about 63%, other minor millet crops 2%, sugarcane, oilseeds, jute and cotton taken together 6% and other miscellaneous crops 29%. The level of productivity is extremely low, due to interior cropping patterns, vagaries of monsoon, inadequate use of fertilisers and manures and very slow progress made in the adoption of scientific agricultural practices.

The Agriculture Department has been reorganised and strengthened and a net work of extension services has been built up. Development of horticulture is of particular importance in Orissa in view of the fact that the percentage of tribal population constitute 24.1 per cent of the total population of the state and the major agricultural possibilities in the tribal areas are horticulture, mainly development of fruit trees.

In case of foodgrains, the rate of growth envisaged is 8% per annum as against the national target of 5%. With the additional production of 23 lakh tons by the end of the fourth plan the level of good grains production at the end of the fourth plan is expected to be 77 lakh tons.

The proposed outlay for the fourth plan is 188 crores or 40.8% of the total outlay of the State for Agriculture, and Allied subjects (including rural works).

Animal husbandry and dairying:

In 1960-61, the net value of livestock output of Orissa was estimated at Rs.20.05 crores. This formed 4.6% of the total State Income. The absence of good breeds amongst the cattle, inadequate feeding, lack of adequate veterinary facilities and poor care and management are the causes of low productivity.

During the Fourth Plan it is proposed to collect and pasteurise 10,000 litres of milk from the milk shed area under the Cuttack Milk Union Scheme for supply to the towns of Cuttack, Bhubaneswar and Puri.

Emphasis will be given in the Fourth Plan to sheep development and also to intensive Egg Production Schemes.

Minerals:

The most important of Orissa's natural resources is its mineral wealth. The resources so far known are considerable and diverse, and the potential mineral occurrences give promise of discovery of large deposits. The main effect of the lack of development of mineral resources of Orissa was that despite the existence of vast resources, the net output of mining of the State in 1961 was only 7.03 crores of rupees. The contribution of this industry to the State Income, which was the lowest among all the States, came to about 3.6 per cent in 1960-61. In 1961, Orissa's mineral industry provided employment only to some 82,000 persons or about 1.2 per cent of the working force engaged in all productive activities. In 1960-61, thanks to large scale development of iron ore mining for exports to Japan and supply to Rourkela and Bhilai Steel Plants and of manganese mining for supply to ferro-manganese plants at Joda and Rayagada, the net output of mining industry was Rs.8.98 crores. Compared with the principal mineral bearing States, labour productivity in the mining industry of Orissa is lower. This is so specially because of lower degree of mechanization of Orissa's iron ore, coal and manganese mines and limestone quarries, heavy rain-fall which frequently interrupts mining operation and poor health standards prevailing in Orissa.

Orissa has 'very adequate' reserves of Iron ore, manganese, and limestone and dolomite. The iron ore of Orissa has an iron content varying from 55 per cent to 69 per cent. The other minerals are coal, chromite, Bauxite and China and fire clay etc.

The State owned Orissa Mining Corporation will need further share capital during the Fourth plan period. Against their total requirement of Rs.21 crores they would raise loan capital of Rs.14 crores and share capital of Rs.7 crores. With the capital thus available the Corporation would undertake mining operation for supply of lime stone to the 1200 tons a day capacity of Bargarth Cement Plant, Chromite to the 10,000 tons a year capacity of the Ferro-Chrome plant, iron ore for the 1.5 lakh tons a year capacity of the Talcher pig Iron plant, iron ore at Daitari for export through Paradeep and for the pelletisation plant and minerals to the other-state owned industrial units.

The total proposed outlay on mineral development is Rs.8 crores.

Forests:

Forests which cover 65,857 sq. kms. or about 42% of the State's geographical area are another rich source of Industrial raw material. 60 per cent of the forests are well demarcated and supports forests growth of reasonable value. Even within the demarcated forests 80 percent of the available species are utilised merely as firewood. Besides timber and fire-wood, bamboo is an important forest product. The most important industry based on forest resources in the State is paper.

Quick maturing spices like Casuarina, Cashew and Eucalyptus are chosen and are being planted in coastal region. In moist sal and Teak Zones, reorganisations of these species is being promoted. For better and quicker extraction of produce from forests, adequate communication facilities are necessary. It is proposed to take up construction of 2500 miles of new roads and improve 1000 miles of existing road during the Fourth Plan. The Orissa Forest Corporation has been established.

Industry:

Industrially, Orissa is among the most backward states in India. In 1956-57, manufacturing activities accounted for 8 per cent of the total output and 7.5 per cent of the total employment in the State. The contribution of industries to income and employment was lower than the comparable proportions for all India (16.3% and 9.8%). Factory employment in Orissa was hardly 10 per 1000 population in 1958 as compared to 74 in all India. For every worker employed in registered factories, there were more than 18 persons employed in non-factory enterprises. Industrial establishments falling outside the scope of Factories Act contributed a much larger proportion (48%) to total industrial output in Orissa than in the country as a whole (18%).

In 1956-57 about 40% of the total employment in factories was in agriculture based industries, of which textiles and rice mills were the most important. Forest based industries employed 26 per cent of the factory workers with paper manufacture as the largest in the category. A little over 12 per cent of the factory workers were in mineral-based industries, consisting mainly of cement and ceramics.

By the end of Third Plan the Industrial Development Corporation would have completed its Bargarh Cement Plant, a rolling mill, a cable plant, a file unit, the Hirakud workshop and the expansion of Kalinga Iron works. In the Fourth Five Year Plan, 18 projects figure, out of which 8 will be mineral-based, 3 relate to cement, 5 will be engineering and two chemical and other industries.

Industrial development in Orissa has largely been confined to the north of Mahanadi. In this region there are four concentrations of industries at Cuttack, in Rourkela - Rajangpur areas, Hirakud - Brajraj - nagar region and at Balasore. The Cuttack complex of industries is based on textiles, engineering workshops, printing presses, glass and glassware, and saw milling industries. The Rourkela - Rajangpur complex is based on steel, cement and to some extent textiles. Hirakud - Brajrajnagar complex is based on paper industry supported by aluminium, engineering works, bidi manufacturing and saw milling. Balasore has a large concentration of rice mills and a few engineering works. It will be seen that Cuttack and Balasore which have a direct rail link with Calcutta have mostly market oriented industries.

Power:-

Since the beginning of first plan, Orissa has made a great progress in Power Generation. At the end of 1950 the installed capacity of power plants in the State was only 4.6 M.W. in public utility power stations and approximately 5 M.W. in industry owned power stations. Orissa's share in the country's installed capacity and generation rose from 0.27 per cent in 1950 to about 3.6 per cent in 1960-61. The generating capacity at the end of Third Plan was likely to be 429.50 M.W. It would, however, rise to 914.50 by 1969-70, when all the projects now under construction would be complete in all respects. It is proposed to electrify about 2000 villages and small towns during fourth plan period. The expansion work in respect of Talcher Thermal Station and Indravati Hydro Electric Project is to be

taken up during the current plan. Out of total electricity consumed, about 90% is Industrial Power and 5 per cent is Domestic consumption. The total proposed outlay under power for the Fourth Plan is Rs.63.00 crores.

Transport:

Orissa is provided with poor rail facilities. In 1957 there were only 858 miles of railways in the State and the ratio of route mileage to land area was 13.9 miles per 1000 sq. miles or about half of that for India as a whole (27.3 miles per 1000 sq. miles). With nearly twice the land area of West Bengal, Orissa had roughly one third of the length of railway mileage. Rail lines are being improved from operational point of view and two new lines (Sambalpur Titlagarh and Kottavalasa - Bailadilla) will be available by the end of Fourth Plan period. At least one rail link is expected to be forged between the iron Ore ranges of Keonjhar - Bonai and Paradeep.

During Fourth Plan it is proposed to take up construction of 40 miles of new roads and 66 bridges and improvement of 527 miles of existing roads. To ensure quick and timely movement of fertilizers, seeds, technical know-how and agricultural produce for marketing, it is proposed to upgrade to O.D.R. Standard above 8,500 miles of rural road and to improve 4000 miles of Panchayatsamiti roads and 8000 miles of Panchayat Roads which are at present in poor condition. An outlay of Rs.25 crores has been proposed for roads in Fourth Plan and 3 crores for the road transport.

The following table gives a view of State Transport service in the State of Orissa:

<u>Items</u>	<u>1961-62</u>	<u>1964-65</u>
Route miles	10,230	12,850
Number of routes	208	237
Service miles(000s)	9900	12,160
No. of vehicles	386	498
No. of passangers carried (000s)	10,898	12,649

Social services:

Education: The target at the end of Third Five Year Plan was to enrol 82% of the children in the age group up 6-11 in the primary schools. The target for the Fourth Plan is to raise the enrolment to 90%. For this purpose it will be necessary to have 17,300 more teachers and to open about 2,000 more schools in areas which are not served by adequate facilities. The main problem is to attract girls to primary schools.

The Fourth Plan aims at establishing 2000 more middle schools in the different parts of the State with a weightage for the backward areas and for girls. 1000 more high schools will be opened during Fourth Plan which will be able to enrol 22% of the boys and girls in the age group 14-17.

Orissa unfortunately occupies the lowest position in university education among the States in India. Fourth Plan does not contemplate opening of any new colleges (except women's colleges) for general education. Instead it is proposed to consolidate the existing colleges by improving their building, equipment, hostels, laboratories and libraries.

The plan includes increase in the grant to the Utkal University to maintain and improve post-graduate classes and to start post-graduate courses and research facilities in various subjects in which such facilities do not at present exist. An outlay of Rs.31 crores has been proposed for general education.

The anticipated output from the existing two engineering colleges and from outside institutions is 1650. It is proposed to increase the admission in both the colleges in the beginning of Fourth Plan and to establish a new college with an initial admission of 250 in the Third Year of the plan.

It is proposed to establish a Foreman's Training Centre with the assistance of the West German Government at Rourkela to train Technical Teachers and to produce Foreman type of man to meet the acute shortage of this class. As outlay of Rs.9 crores has been proposed for Technical Education and Craftman Training.

Health:

Public Health conditions in Orissa are poor. Orissa has the highest recorded death rate from the major diseases. The bed strength from one bed for 3,000 population is to be increased to one bed for 2,090 population. It is also proposed to set up two more T.B. Hospitals and to increase the bed strength of T.B. Hospital at Chandpur. A Regional Medical College at Rourkela is to be started during the Fourth Plan.

It was expected that by end of Third Plan there would be 1950 doctors in the State as against the requirements of 5700 doctors at the rate of one for every 3500 population.

Under family planning schemes, sterilisation units have been set up in each district headquarter's hospital and capital Hospital. It is proposed to set up sterilisation units in 38 sub-divisional hospitals and 248 primary health centres by the end of the Third plan. The remaining sub-divisional hospitals and primary health centres will be covered during the Fourth Plan. The target for the Fourth Plan period is to achieve in annual sterilisation rate of 6 per thousand population. By the end of the Fourth Plan 500 medical personnel are to be trained besides 1.25 lakh non-officials. An outlay of Rs.20 crores has been proposed for Fourth Plan.

Table 2.2 Wage Employment of Adult Male Agricultural Labourers during 1956-57.

Type of Employment	Average number of days worked on wages during the year.
All Labourers	
Agricultural Labour	175.48
Non-agricultural Labour	30.95
Total	206.43
Attached Labourers	308.18
Casual Labourers	177.38

Source:- Indian Labour Statistics, 1967.

Table 3.1 Average daily employment, total wage bill, per capita annual money earnings and index numbers of money earnings of employees earning less than Rs.200 per month in Manufacturing Industries.

Year	Average daily employment ('000s)	Total wage bill (Rs.'000s)	Per capita annual earnings (Rs.)	Index number of money earnings (Base 1951=100)
1956	14	13,062	949	114.8
1957	16	14,983	956	122.3
1958	17	16,232	981	126.1
1959	18	19,725	1,076	150.8
1960	16	17,431	1,090	156.8
1961	18	20,309	1,154	169.8
1962	29	38,384	1,313	159.6
1963	14	18,390	1,292	152.8

Note:- The above figures exclude those for Railway Workshop and groups of industries of seasonal nature consisting of Food, Beverages, Tobacco and Gins and Prosses. The figures of per capita annual earnings have been obtained by dividing the actual wage-bills by the corresponding figures of average daily employment. Figures of average daily employment given above are as obtained from returns received under the Payment of Wages Act, 1936 and hence, are different from those collected under the Factories Act, 1948.
